AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A non-asbestos friction material made by molding and curing a composition comprising a fibrous base other than asbestos, a binder, a filler and an abrasive; wherein the abrasive includes zirconium silicate beads having a spherical shape and an average particle size of 15 to 500 µm.

2. (Cancelled)

- 3. (Original) The non-asbestos friction material of claim 1, having a zirconium silicate bead content of 0.5 to 25 vol%, based on the overall composition.
- 4. (Previously Presented) The non-asbestos friction material of claim 1, wherein the fibrous base includes metal fibers.
- 5. (Previously Presented) The non-asbestos friction material of claim 1, wherein the fibrous base includes copper fibers.
- 6. (Previously Presented) The non-asbestos friction material of claim 1, wherein the average particle size of the zirconium silicate beads is at least 30 μ m.
- 7. (Previously Presented) The non-asbestos friction material of claim 1, wherein the average particle size of the zirconium silicate beads is at least 50 μm.

8. (Previously Presented) The non-asbestos friction material of claim 1, wherein the

average particle size of the zirconium silicate beads is not more than 300 μ m.

9. (Previously Presented) The non-asbestos friction material of claim 1, wherein the

average particle size of the zirconium silicate beads is not more than 150 μ m.

10. (Previously Presented) The non-asbestos friction material of claim 3, wherein the

zirconium silicate bead content is at least 3 vol%, based on the overall composition.

11. (Previously Presented) The non-asbestos friction material of claim 3, wherein the

zirconium silicate bead content is not more than 15 vol%, based on the overall composition.

12. (Previously Presented) The non-asbestos friction material of claim 3, wherein the

zirconium silicate bead content is not more than 8 vol%, based on the overall composition.
